let us then consider for a moment the world as described by the physicist it consists of a number of fundamental particles which appear bound by certain natural laws which indicate the form of their relationship now the physicist himself who describes all this is in his own account himself constructed of it he is in short made of a conglomeration of the very particulars he describes no more no less bound together by and obeying such general laws as he himself has managed to find and to record thus we cannot escape the fact that the world we know is constructed in order and thus in such a way as to be able to see itself this is indeed amazing not so much in view of what it sees although this may appear fantastic enough but in respect of the fact that it can see at all but in order to do so evidently it must first cut itself up into at least one state which sees and at least one other state which is seen in this severed and mutilated condition what ever sees is only partially itself we may take it that the world undoubtedly is itself i e is indistinct from itself but in any attempt to see itself as an object it must equally undoubtedly act so as to make itself distinct from and

therefore false to itself in this condition it will always partially elude itself

this book is about initiatives to bring environmental management engineering and science to the multimedia age those initiatives integrate old with new methods for collecting storing modelling representing and making available environmental information on the internet on the world wide environmental information is increasingly multidimensional it includes text audio graphics photographs and video data types as a result environmental monitoring information systems design and modelling activities are changing dramatically monitoring experts are becoming familiar with image and sound acquisition and processing tools environmental multidimensional data are part of the internet based information infrastructures which are being developed at regional national and international levels the wealth of multimedia information is facilitating the creation of a new generation of environmental models using techniques originally developed for other areas such as the entertainment industry this is a compact presentation of methods to handle multidimensional environmental information the book combines the introduction of fundamental concepts with guidance to related and expanded views these views are detailed in a comprehensive list of links periodically updated at the book s web site and a bibliography

comprehensive coverage of critical issues related to information science and technology

the papers comprising this second volume of human behavior and the environment represent as do their predecessors a cross section of current work in the broad area of problems dealing with interrelationships between the physical environment and human behavior at both the individual and the aggregate levels considering the two volumes as a unit we have included papers covering a broad spectrum of problems ranging from the theoretical to the applied and from the disciplinary based to the interdisciplinary and professional approximately half of the papers are written by psychologists with the remainder coming in part from such other disciplines as sociology geography and from such diverse applied and professional fields as natural recreation landscape architecture urban planning and operations research the volumes thus provide an overview of work on current topical problems yet as the field is developing specialization is inevitably increasing apace and the editors as well as the publisher have become convinced of the

desirability for future volumes in this series to be organized along topical lines with successive volumes devoted to different aspects of this rather sprawling field thus volume 3 currently in the planning stage will be devoted exclusively to the interaction of children with the physical environment considered from diverse viewpoints again including authors from diverse fields of specialization

in living in the landscape arnold berleant explores new ways of thinking about how we live and might live in the landscapes that enfold us through the concepts of aesthetic engagement and environmental continuity he proposes a new paradigm that offers a holistic approach to the meaning of place and places of meaning in our lives although environmental aesthetics is linked in the popular mind to dramatic vistas and monumental landscapes the grand canyon for example berleant is much more concerned with the commonplace settings of everyday life he argues that our active appreciation of or aesthetic engagement with the prosaic landscapes of home work local travel and recreation plays a vital role in our discovery of hidden continuities as well as pleasure and meaning in the places we inhabit berleant begins with a general introduction to environmental aesthetics identifying the kinds of experience meanings and values it involves and describing its historical sources and the issues with which it is concerned in the rest of the book he spotlights new directions in the field as they relate to education community creativity and the sacred and provides an insightful analysis of negative environmental aesthetics throughout he is both thoughtful and entertaining as evidenced in his extended critique of the pop post modern environment of disney world berleant addresses issues commonly associated with the environmental movement e g preservation pollution control and quality of life but his study draws from a wide range of disciplines and for that reason should also appeal to scholars and students interested in art and

aesthetics landscape architecture and planning urban and environmental design and cultural geography as well as environmental studies

the changing life course is the second volume of the two part work dimensions of human behavior this volume covers the same topics as the first but is arranged longitudinally and emphasizes the adjustments which social services professionals must make in their practice with clients at different stages of the life course an instructor s resource guide for both volumes is available to adopters who request it on their departments or organizations letterhead

this handbook is designed as guidance for policymakers and practitioners to mainstream pro poor environment and climate concerns into planning budgeting and monitoring mainstreaming is achieved by putting poverty environment issues at the heart of government in other words by taking these issues into mainstream economic decision making processes particularly the national and sub national planning and budgeting processes led by ministries of finance planning and local government and supported by ministries of environment
