the study of the response of solid objects when they are subjected to stresses and strains is
known as the strength of materials which is sometimes referred to as the mechanics of
materials material strength is defined as the point on the engineering stress strain curve
known as the yield stress which is the point beyond which the material undergoes
deformations that will not be entirely reversed upon removal of the loading as a
consequence the member will have a deflection that is permanent the point on the
engineering stress strain curve that corresponds to the stress that causes a material to
fracture is known as the ultimate strength of the material strength of materials often known

as the mechanics of materials is a discipline that primarily relates to the many techniques of estimating the stresses and strains in structural components like beams columns and shafts the techniques that are used to anticipate the reaction of a structure under loading and its susceptibility to different failure modes take into consideration the characteristics of the materials such as the yield strength ultimate strength young modulus and poisson ratio of the material this ensures that an accurate prediction can be made in addition one must take into account the macroscopic qualities geometric properties of the mechanical element these include the element length breadth thickness boundary limitations and sudden changes in geometry such as holes
